Paula,

1. Send me the names and email addresses of the people who you would like to have access to the viewer.
2. Do you want the National Registry of Historic Places added to the viewer? They currently are not in it.

Is this for a particular site? Our interactive maps use a variety of base maps and imagery that change be changed by clicking on the base map gallery. The only data layer we have for historic sites is the national registry of historic places from the National Park Service.

John – I'm looking for the GIS map with all of the cultural, historical landmarks as well as all the sampling locations on an aerial image – one that I can send (email link) to USACE and their contractor for some work they are doing for us. Can you tell me how to access such images and send to USACE? Thanks.

All,

The new version of TERA has been deployed. This new version is built using JavaScript, making it available on mobile devices as well as your desktop computers. All the same data and functionality have been retained, it just looks and feels slightly different.

If you work for a governmental organization, you now have access to the internal version. If you do not work for a governmental organization, then you only have access the external version. If

you are not able to access the version you feel is appropriate for you, please let me know.
